Perimenopause, menopause and beyond	3
Scientific research - what do we actually know about menopause and perimenopause?	8
Underrepresentation of women in health research and understanding	9
	11
Module 1: Hormonal changes, perimenopause and menopause	17
Menopause, lifespan, history and attitudes	17
Perimenopause	19
Premenopausal hormones	20
Oestrogen	20
Types of oestrogen	20
Functions of oestrogen in the female body	21
Premenopausal oestrogen level fluctuations	22
Oestrogen levels between puberty and menopause	23
The Menstrual Cycle	24
Progesterone	25
Androgens (male hormones) including testosterone	26
Perimenopause (the climacteric)	27
Symptoms of perimenopause	28
Hormonal changes during perimenopause	29
Oestrogen in perimenopause	29
Progesterone and testosterone in perimenopause	29
Hormonal changes during perimenopause	30
Symptoms of perimenopause and menopause	31
Hot flushes, night sweats and sleep disturbances	31
Skin changes	32
Weight gain	33
Libido and vaginal changes	33
Mood changes	34
Brain and cognitive function	34
Joint and muscle stiffness	35
Postmenopausal changes to chronic disease risk	36
Other hormones and substances that may impact perimenopause and menopause	37
Pregnenolone	37
DHEA (dehydroepiandrosterone)	37
Androstenedione	39
Thyroid hormones and function	39
Module 2: Body weight, fat and muscle changes	41
Menopausal weight gain as a public health focus	42

Health impact of obesity	42
Symptoms of menopause made worse by weight gain and / or obesity	44
Postmenopausal body shape is more important than body weight	45
Changes to where body fat is stored (body fat distribution)	45
Waist circumference measurements	46
Why do we gain weight and change shape during menopause?	47
How do menopausal hormonal changes cause weight gain?	47
Age-related decreased basal metabolism and fat oxidation	48
Oestrogen and appetite	51
Anti-inflammatory effects of oestrogen	51
Sleep and abdominal obesity	52
Stress and abdominal obesity	53
Breastfeeding history and abdominal obesity	53
Difference between visceral and subcutaneous fat	54
Muscle mass, sarcopenia and menopause	55
Menopause does not necessarily equal weight gain	57
Underweight and low body fat considerations	58
Module 3: Inflammation, gut health and menopause	60
Perimenopausal hormonal changes and inflammation.	60
Hot flashes, gut health and inflammation	64
Inflammation and visceral weight gain	64
Inflammation and mood disorders	65
Inflammatory foods and diet	66
How stress can cause inflammation	68
Obesity and inflammation	68
Metabolic signals and disturbances linking obesity and abdominal adiposity with stress and mental distress	69
Module 4: Mood, brain changes, stress, perimenopause and beyond	71
The female brain	71
The effect of oestrogen on your brain	71
Perimenopause, menopause and your brain	73
Mental health during perimenopause.	74
Menopause and confidence	74
Menopause can bring mental and emotional clarity	75
Stress and perimenopause	76
The importance of your adrenal system	76
Stress and hormonal balance	77
Blood sugar, stress and sleep	78
Libido	78

Module 5: Nutrition for perimenopause and postmenopause	80
Please don't diet too strictly	81
Diet patterns, meal frequency and weight changes at menopause	82
How do smaller meals more regularly keep you slimmer?	82
Breakfast skipping	82
How do smaller meals more regularly reduce menopausal hot flashes?	83
Menopause and appetite	83
Small regular meals, stress levels and sleep quality	83
Energy Balance	84
Dietary Energy (kilojoules or calories)	85
Dietary energy requirements	85
Women 31-50 years	86
Women 51-70 years	86
Change in focus from specific nutrients to overall diet quality	87
Diet Quality	88
Bidirectional relationship – nutrition and health	89
How diet quality impacts on women's health	90
Western diet	90
Nutrition Basics	90
Carbohydrates	91
Sugars	92
Dietary sources of sugars	92
Sugar's role in health for women 40+	93
Sugar and depression	94
Fructose and mental health	94
Recommended intakes of sugars	94
Understanding sugar content in foods	95
Sugar-rich ingredients	95
Complex carbohydrates and dietary fibre	96
Starch	96
Dietary Fibre	96
Starch and cellulose (fibre) molecules compared	97
Recommended intakes of carbohydrates and fibre	97
Dietary fibre	97
Blood sugar balance	98
Dietary recommendations for balancing blood sugar, supporting mental wellbeing and maintaining a healthy body weight and lean muscle mass	99
Blood sugar balance and stress levels	100
Focus Point – Refined carbohydrates, grains, stress and mental wellbeing	101
Milling and processing of grains and grain-based foods	102

Carbohydrate requirements for women 40+	102
Protein	104
Dietary sources of protein	104
Functions of protein	104
Protein and mental wellbeing	105
Protein, blood sugar balance and appetite control	105
Increased intakes of plant-based protein foods associated with reduced likelihood of early menopause	106
Protein dietary requirements for women 40+	107
Dietary fats	109
Fatty acids	109
Types of dietary fat	109
Saturated fats	109
Unsaturated fats	110
Polyunsaturated fatty acids	110
Health effects of dietary fats	111
Dietary sources of fats	112
Essential fatty acids	112
Linoleic acid, an omega-6 fatty acid	113
Linolenic acid, an omega-3 fatty acid	113
Dietary sources of essential fatty acids	114
Plant vs. animal sources of omega-3 fatty acids	114
Trans fats	114
Fat dietary requirements for women 40+	115
Total fat intake	115
Saturated fat and trans-fat intake	116
Essential Fatty Acids (omega 3 and 6 fatty acids)	116
Which fats are good for women 40+?	116
Olive Oil (recommended)	116
What about coconut oil?	116
Low fat foods	117
Mediterranean diet	118
Module 6: Foods to limit or avoid	119
Why?	119
Foods that negatively impact overall health	119
Highly processed foods (Ultra-processed foods)	119
Foods that make menopausal symptoms worse	121
Caffeine, hot flashes and sleep disturbances	121
Alcohol	122
Trigger foods for menopausal symptoms	123

Energy dense foods	123
Module 7: The foods that nourish us	124
Food intake recommendations for optimal perimenopause, menopause and post menopause	124
Vegetables & Fruits	124
Intake recommendations for vegetables and fruits	124
Fruit	126
Wholegrains	127
Grain food recommendations	128
Oats	129
Meat, poultry, fish, eggs, nuts, tofu, nuts and seeds	130
Nuts & seeds	132
Red meat	132
Dairy Foods & Alternatives	133
Phytoestrogens	134
Hydration, perimenopause and menopause	136
Staying well hydrated during perimenopause and menopause	137
Drink enough water.	137
Drink earlier in the day	138
Drink a glass of water before a meal	138
Module 8: Putting it together - nutrition plan for perimenopause and women 40+	139
Focus first on meeting dietary requirements	139
What dietary patterns will help attain a healthy weight?	140
How much weight loss is sustainable and healthy during menopause?	141
How can weight loss be maintained?	141
Recording dietary intake	141
Practical tips to encourage dietary quality	142
Challenges to eating well when stressed	142
Meal, snack and shopping tips	143
Improving appetite and dietary quality	143
Easy meals	144
Key Points - Putting it all together	144
Questions	147
Sample eating plan	147
Breakfasts	147
Snacks (morning and afternoon)	147
Lunches	148
Dinner	148
Supper	148

Other factors that can influence perimenopause and menopause	149
Sleep	149
Exercise	149
Body composition	149
Yoga and mindfulness practices	150
